MULTI POINT LOCKING SYSTEM WITH SLAM SHUT HANDLE.

Now ready for release; our new compression latch with pop up T-handle is just one of Metrol's latest product developments. It has been bench marked and exhaustively tested to make sure it outperforms competing models by building on some of their established functions. Enhancing usability with the pop-up T-handle, allowing rotation in both directions regardless of product variation and a padlock loop for additional security, to name just a few such improvements.

With a heavy focus on functionality and quality, the 1710 is designed to be the number one choice for anyone wanting to add security to power generators, enclosures and a variety of commercial vehicles to name a few.

- Backward compatible with other cut outs of locking handles on the market
- Its well-deserved IP66 rating guarantees against full weather protection
- The polyamide surround and powder coated die cast handle provides long lasting performance
- Available as key locking CH751 and non-locking as standard (other key locking options available on request)

Providing easy installation for installers and end users alike, call Metrol for more information: **+44(0)1604 499 332**
