SLUDGEbuster

Exocet® Sludgebuster is a formulated chemical additive for use as a tank, pipework and vessel cleaner where fuel, oil or other hydrocarbon contamination and solids build-up is a problem. It is particularly suited to treat tanks where biodiesel deposits are an issue.

APPLICATION

It is recommended that Exocet® Sludgebuster is added to the bulk fuel or other carrier fluid and where possible circulated through the tank to be cleaned for a number of hours. In this way it is ideally suited to be utilised with fuel polishing and/or fuel filtration equipment. It can also be used with professional pressure washing equipment. Left alone it will disperse the products of biodiesel dropout and facilitate free fuel flow.

FEATURES

- Contains concentrated hydrocarbon deposit control additive/dispersant chemistry
- Broad-spectrum solvent washing capability
- Rapid dispersion of agglomerated biodiesel dropout products

BENEFITS

WHEN TO USE

- Solids build-up in tank bottoms, walls and associated pipework.

TREATMENT RATIO

1 litre treats 1,000 litres of fuel.

SIZES AVAILABLE

All exocet® branded products are available in a range of sizes to 1,000 litres.
